Arrived 10:10 · Left 10:40 (GPS, within about 100 m)
Tracked on a route
Plow driveway, Salt walkway
Route: Monday North Side

About this report: it lists what was recorded in PlowR. A route stop's start is when it became the current stop (the route started, or the previous stop was completed), so it includes travel; its completion is when it was marked done. "Arrived" and "Left" are when the phone came into and went out of an area about 100 m around the property's pin, as iOS reported it, which can be a few minutes late; "not caught" means it wasn't seen (location off, or already inside when the stop began). Visits completed from the Schedule or logged by hand have no recorded time. Records can be edited in PlowR after the work. Photos are shown with the visit they were saved with. "Taken" is when PlowR's camera took it. "File dated" is the date stored in a photo picked from the library, which can be changed, and "zone assumed" means the file gave no time zone, so it was read in the phone's. A photo with no time is one whose time PlowR doesn't know, and isn't shown to be from that visit. Weather figures are estimates from Weather for the area within about 1 km: whole-day totals, before and after the visit, not measurements at the property, and not available before 2022 or for today. Weather data sources: https://weatherkit.apple.com/legal-attribution.html. Times are Eastern Time. This is the business's own record, not a certified or independent one, and not legal advice.

Prepared on October 13, 2026.
